Title – *Butterflies at Sunset*

Medium – Blender Video Render

Duration – 21 seconds

My idea while working on this project was to make a relaxing scene. I decided on the butterflies flying towards a sunset over the water because it felt to me like it would be very peaceful and it was something I think I really needed to make during this time to counter all the chaos with a few moments of calm. I've always been a fan of butterflies and I've had a butterfly theme going for most of the work I've done this semester. This project was one where I wanted to focus on the final stage of its life. I learned several new skills during the making of this project like how to use a newer version of Blender, how to create grass, and how to make water.

Title – *Strange Starry Night*

Medium – Blender Video Render

Size/Duration – 8 seconds

For this project, I wanted to make a scene that was both a little confusing and mysterious. There was a lot going on in my life that was making me feel very overwhelmed, lost, and afraid. It felt like a nice way to express the way I was feeling like everything had changed so much and it how difficult it was to make sense of all of it. I decided on a nighttime scene and having the strange part be that in this world the flower has butterfly wings as its petals and the butterfly has petals for wings. During this project, I used Blender once more and learned how to create a starry sky and also how to make a flower.
